

Filtering Data Using LINQ

Filtering Data

Query syntax uses the **where** clause

Method syntax uses the `Where()` method

Filtering Data

Query Syntax

```
(from row in products
 where row.Name
        .StartsWith("S")
select row)
```

Method Syntax

```
products.Where(
    row =>
    row.Name.StartsWith("S"))
```

Using the And Operator

Query Syntax

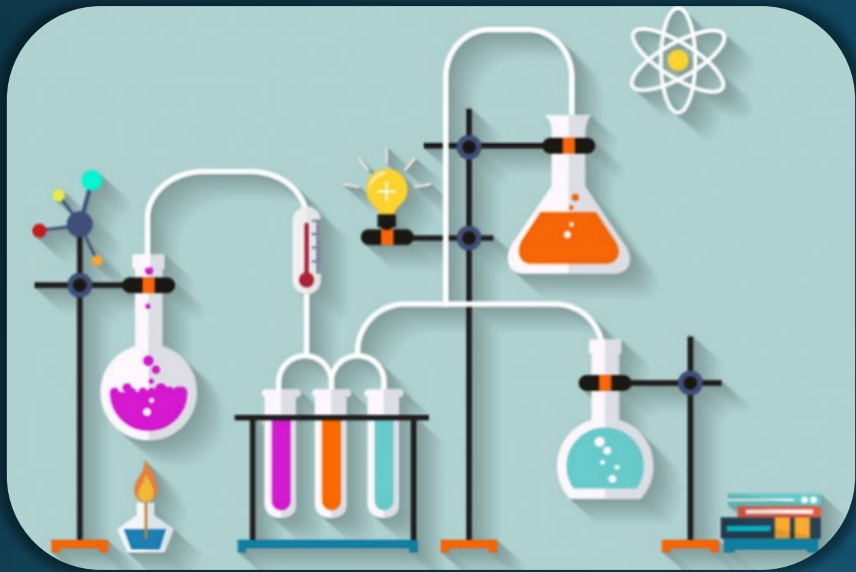

```
(from row in products
where row.Name
    .StartsWith("L") &&
    row.StandardCost > 200
select row)
```

Method Syntax

```
products.Where(row =>
    row.Name
        .StartsWith("L") &&
        row.StandardCost > 200)
```

- Using the Where clause
- Using And and Or

Order By & Where Lab
