

# XAML Basics Lab - WPF

Perform these labs on your own computer using Visual Studio 2022 or later to ensure you understand the lessons presented in the corresponding videos and lectures.

## Lab 1: Create a WPF Application

Create a new WPF application named **WPFBasicsLabWPF**.

Open the **MainWindow.xaml** file and set the **Title** attribute to **"User Detail"**.

Set/Add the following attributes on the <Window> control.

```
WindowStartupLocation="CenterScreen"  
Height="600"  
Width="800"
```

### Try It Out

Run the application and view the UI.

## Lab 2: Add a Stack Panel, Label, and Text Box

Replace the <Grid> ... </Grid> with <StackPanel> ... </StackPanel>.

Set the **Margin** attribute on the <StackPanel> to be **10**.

Add a <Label> within the <StackPanel> and set the following attributes on this label control.

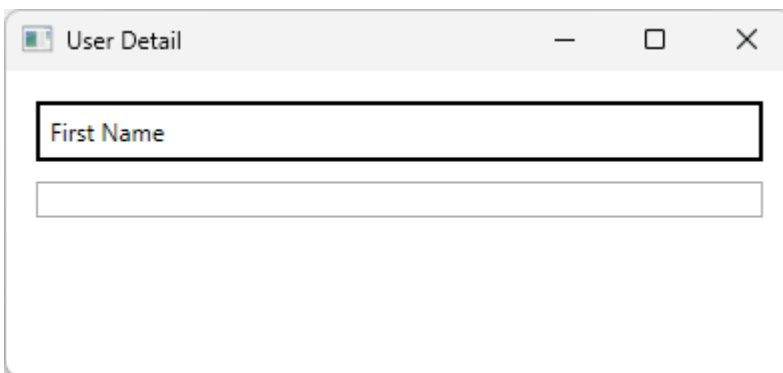

```
Margin="5"  
Content="First Name"  
BorderBrush="Black"  
BorderThickness="2"
```

Add a `<TextBox>` below the `<Label>` control.

Set the **Margin** attribute to **5**.

## Try It Out

Run the application and view the UI. It should look like the following screen shot.

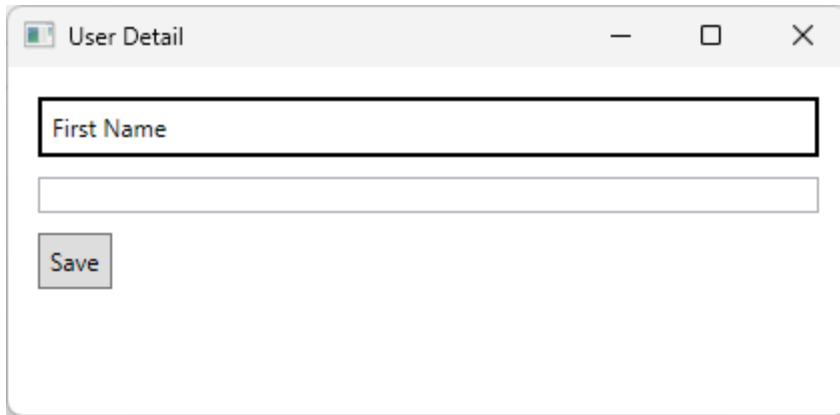

## Lab 3: Add a Button

Add a `<Button>` control below the `<TextBox>` control and set the following attributes on the button control.

```
x:Name="SaveButton"  
HorizontalAlignment="Left"  
Margin="5"  
Padding="5"
```

## Try It Out

Run the application and the UI should look like the following screen shot.

## Lab 4: Add a Click Event

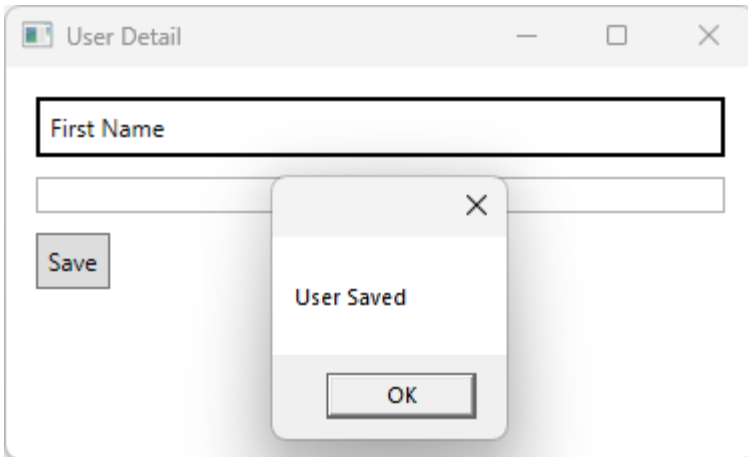

Add a click event to the <Button> control.

Write the following code in the Click event.

```
private void SaveButton_Click(object sender,
RoutedEventArgs e) {
    MessageBox.Show("User Saved");
}
```

## Try It Out

Run the application and the UI should look like the following screen shot.

## Lab 5: Add an Image to the Button

Remove the "Content" from the button.

Create an **Images** folder in your project.

Add the **save.png** file into this images folder and set the following properties on this image within the Properties Window.

```
Build Action="Content"  
Copy to Output Directory="Copy Always"
```

Make the `<Image>` control the Content of the Button control.

Set the following attributes on the `<Image>` control.

```
Width="16"  
Height="16"
```

## Try It Out

Run the application and the UI should look like the following screen shot.
